## DETAILED ACTION

### *Election/Restrictions*

1. Claim 7 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 7.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, 6, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsumoto et al. (DE 3820082 A1).

Matsumoto et al. disclose an ink jet printhead comprising :

a channel plate (fig. 1, element 1) having a plurality of ink channels etched into at least one surface thereof (5, 5a);  
a second channel plate having a plurality of ink channels etched into at least one surface thereof (fig. 1, opposing element 1);

actuators respectively associated with each of the ink channels for pressurizing ink contained in the ink channels (element 1 is a piezoelectric member); and a base member (element 2) defining ink supply passages and an ink reservoir communicating with the ink channels via the ink supply passages (fig. 4a), wherein said ink reservoir is defined by a base member made of a material different from that of the channel plates (glass, column 4, lines 35-38), wherein the channel plate is held in butting engagement with a surface of the base member in which an ink supply passage is formed for establishing fluid communication between the ink reservoir and the ink channels and wherein a portion of the base member forms a support plate sandwiched between said first channel plate and said second channel plate (fig. 1).

With regards to claim 3, the limitation that the channel plate is fixed using adhesive is directed towards a method of manufacturing the apparatus and does not further limit the apparatus as claimed.

#### ***Allowable Subject Matter***

4. Claims 8-10 are allowed.

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not disclose the channel plate being formed of silicon and a means defining an ink reservoir communicating with the ink channels, wherein

said ink reservoir is defined by a base member made of a material different from that of the channel plate, wherein the channel plates is held in butting engagement with a surface of the base member in which an ink supply passage is formed for establishing fluid communication between the ink reservoir and the ink channels.

With regards to claims 8-10, the prior art of record does not disclose the base member being formed of graphite.

***Response to Arguments***

5. Applicant's arguments have been considered but are moot in view of the new grounds of rejection.

***Conclusion***
